The screenshot shows a Jupyter Notebook interface running locally at 192.168.2.99:9090/tree/base. The top bar includes a 'Not secure' warning, the URL, and various system icons like star, refresh, and user. On the right are 'Update ...', 'Chat', 'Quit', and 'Logout' buttons.

The main area displays a file tree under the 'jupyter' directory. The tree shows a root folder 'base' containing subfolders: '..', 'arduino', 'audio', 'board', 'microblaze', 'pmod', 'rpi', 'trace', and 'video'. Each folder has a small checkbox icon to its left. To the right of the tree is a table with columns for selection, name, last modified, and file size. The table shows the following data:

	Name	Last Modified	File size
	..	seconds ago	
	arduino	4 months ago	
	audio	4 months ago	
	board	4 months ago	
	microblaze	4 months ago	
	pmod	4 months ago	
	rpi	4 months ago	
	trace	4 months ago	
	video	4 months ago
